Aphelele mtshali

The human problem in KwaZulu-Natal

A large population. A narrow safety net.

12.31M

KwaZulu-Natal population
(2024 estimate)

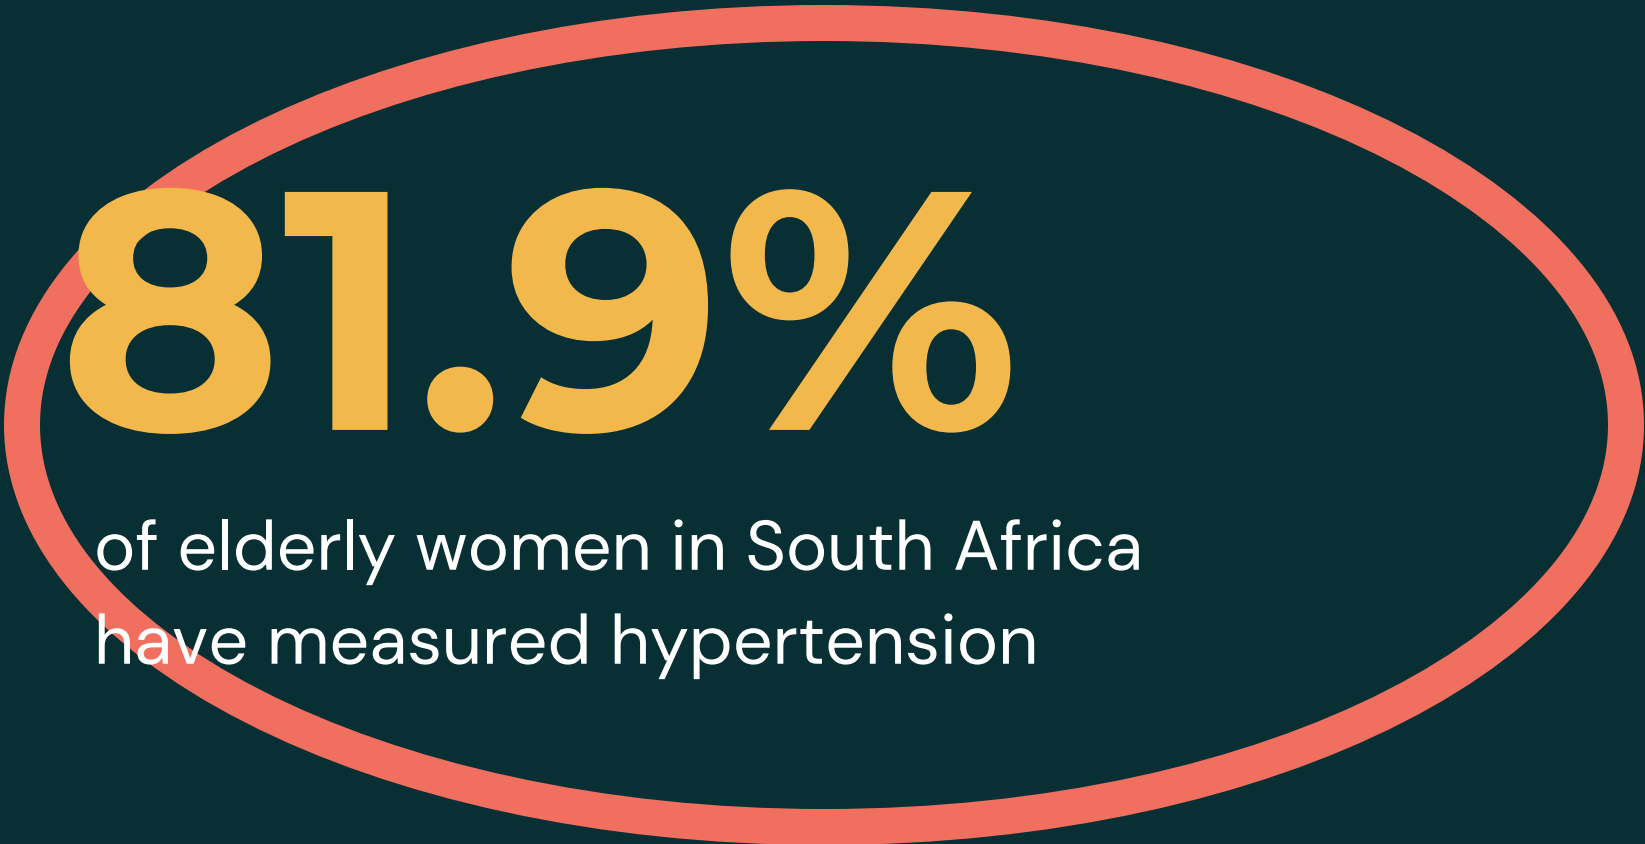

10.2%

have medical aid
coverage

For many elderly women, abnormal vitals go unnoticed while emergency support remains distant or unavailable.

Why early detection matters

81.9%

of elderly women in South Africa
have measured hypertension

The silent risk

Hypertension can progress without obvious symptoms—until a stroke, heart event or crisis makes the risk visible.

EARLY WARNING, NOT DIAGNOSIS

The band flags unusual readings and prompts action. Clinical diagnosis remains with qualified healthcare professionals.

One band. Three levels of support.

A modular pathway that grows from detection to coordinated care.

01

Vital Monitor

Pulse band + user alerts

02

Vital Assist

Family, response centre + transport

03

Vital Care

Caregiver support + follow-ups

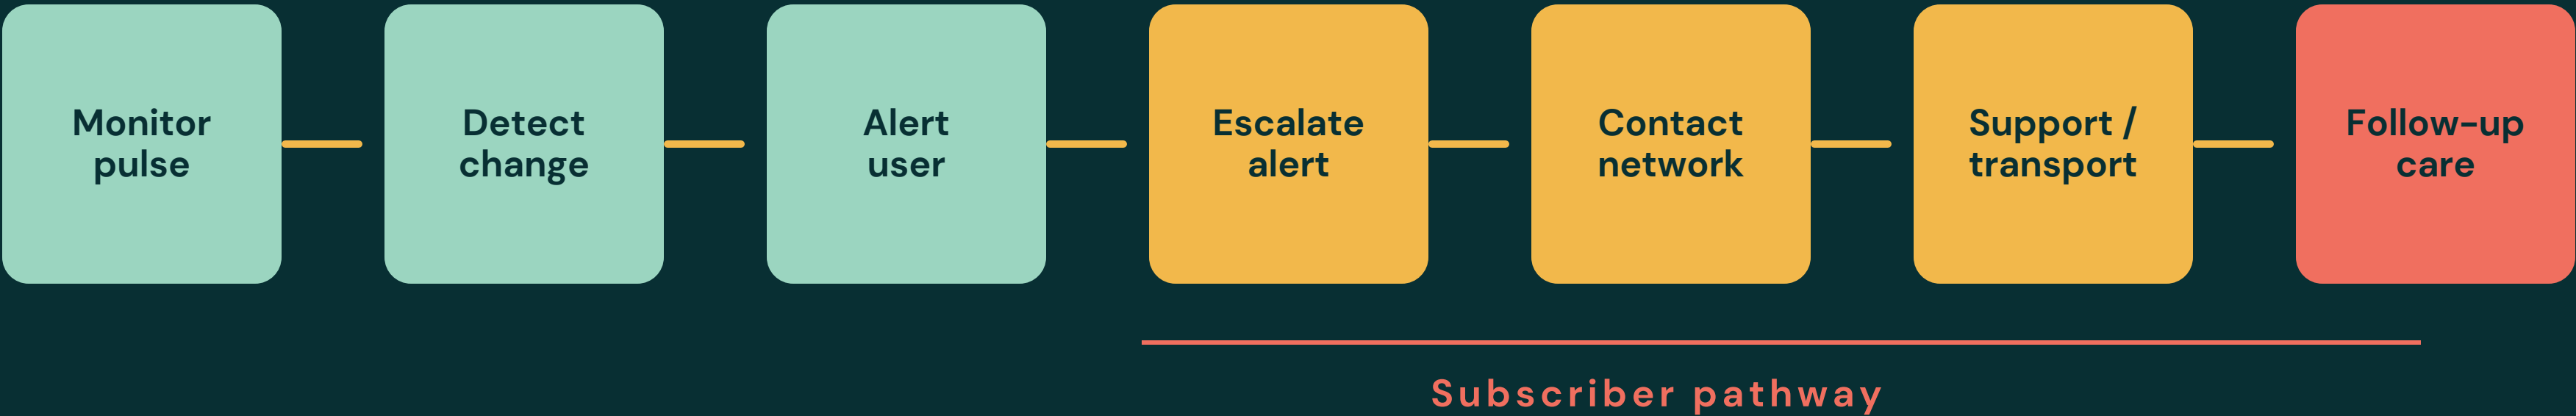

Three tiers, one continuous care pathway

Choose the level of response—not a different product.

	MONITOR	ASSIST	CARE
Purchase model	Once-off	Band + plan	Band + premium
Monthly subscription	—	✓	✓

Caregiver follow-up	—	—	✓

From a pulse reading to real support

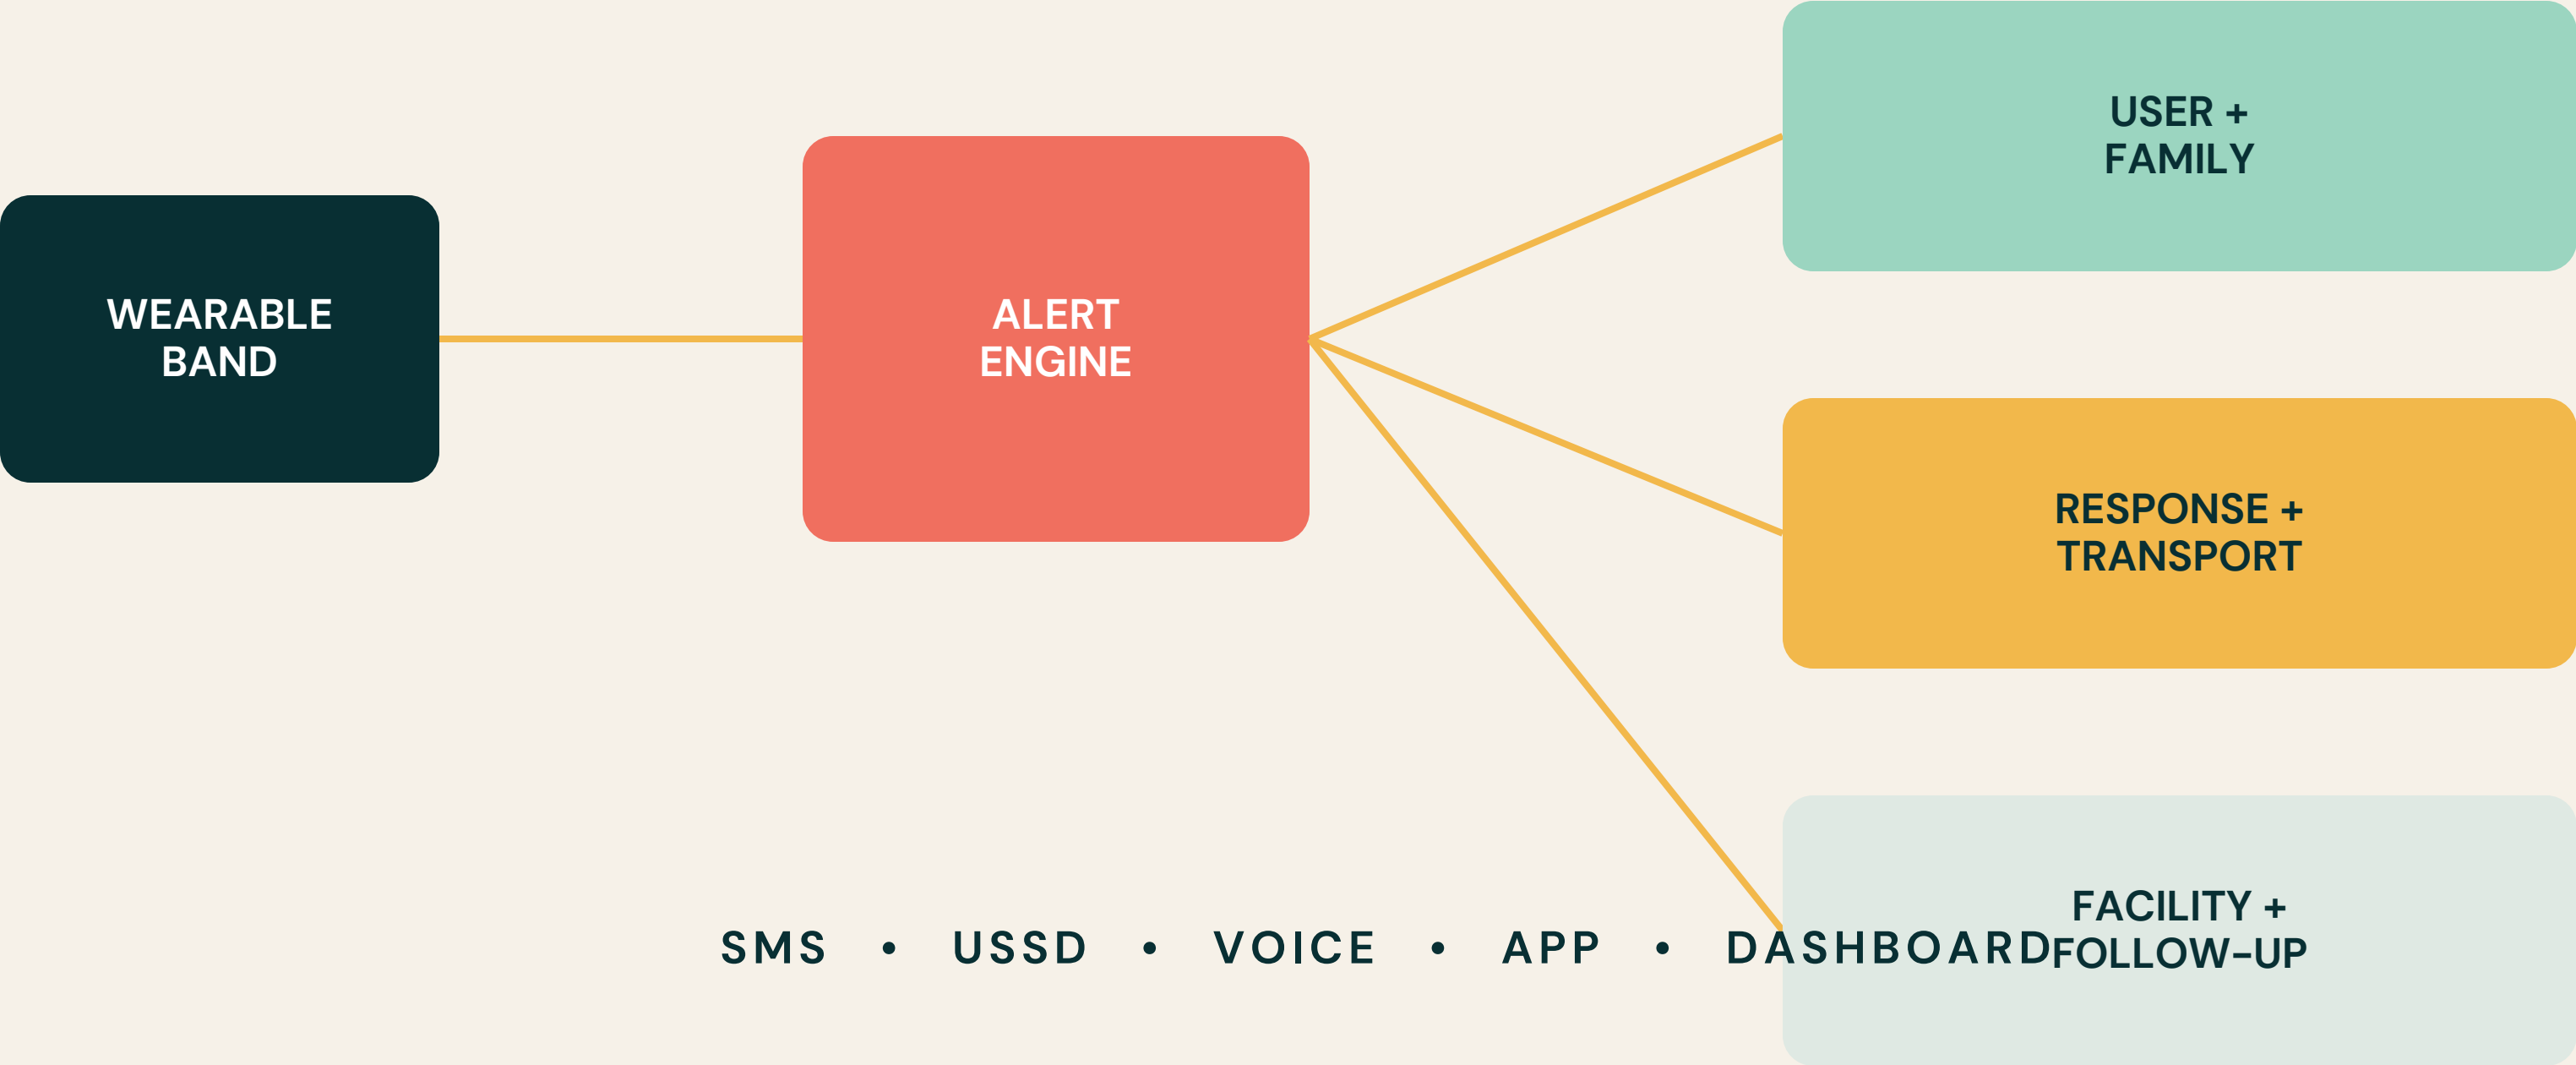

A simple journey for the user. A coordinated pathway behind the scenes.

Every band starts with clear, immediate feedback to the wearer.

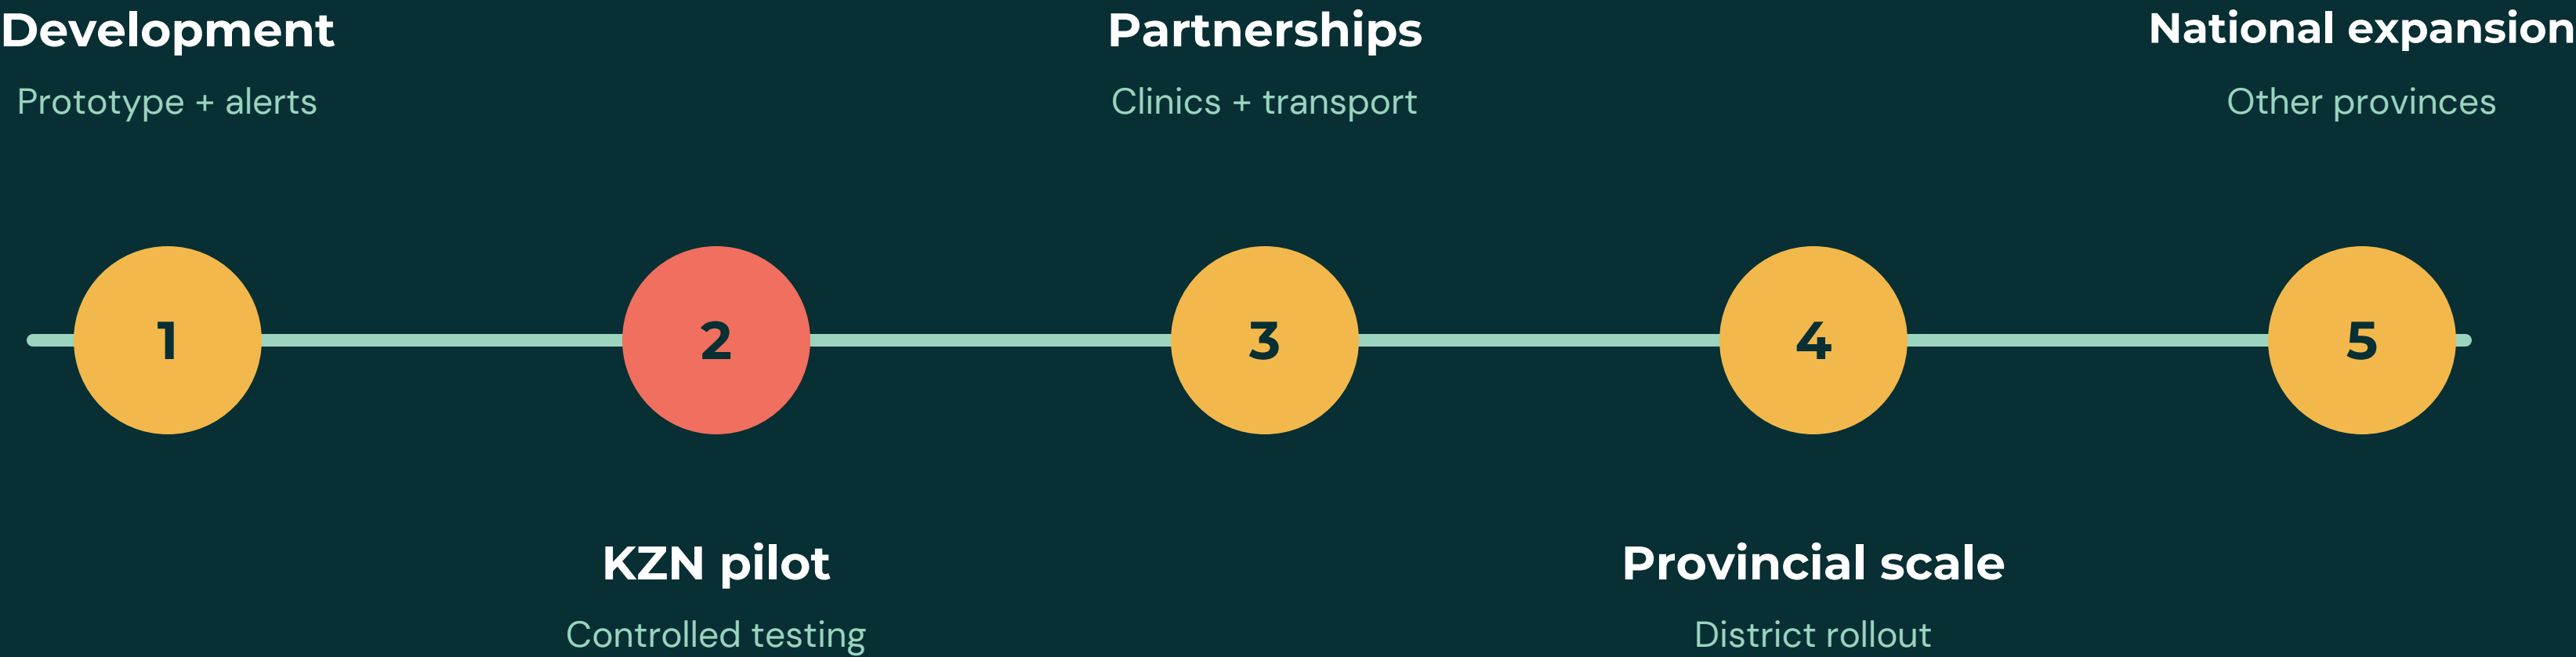

Built for simplicity. Connected for action.

Low-friction channels support elderly users, families and response teams—in local languages.

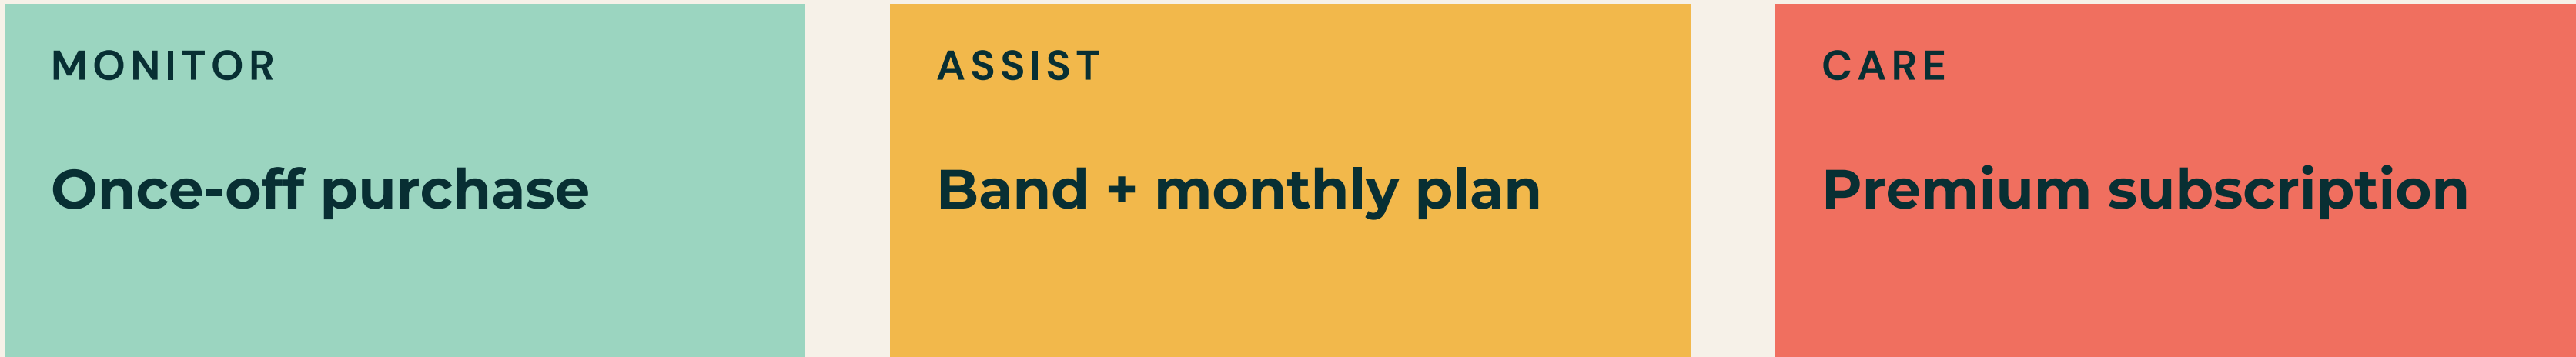

Start focused. Learn fast. Scale with trust.

A phased route from prototype to national reach.

A sustainable model for continuous care

Revenue scales with the depth of service and breadth of distribution.

Revenue funds Response staff • Transport • Caregivers • Communication • Support

Measure what matters—from reach to resolution

A practical scorecard for health impact and operational learning.

DIGNITY • CONFIDENCE • CONTROL

Empowering elderly women

Empowering KwaZulu-Natal's elderly women with vital health support

The background of the slide is a collage of three photographs. On the left, a young Black woman with her hair in a bun, wearing a headset, is shown in profile, looking towards the right. In the center, a young Black woman in teal medical scrubs is looking down at something in her hands. On the right, an elderly Black woman wearing a colorful patterned headwrap and a matching shawl is looking towards the center. The overall theme is the intersection of technology and human care.

Technology meets human care

Bridging technology with compassionate human support

THE INVESTMENT OPPORTUNITY

Back the bridge between detection and care.

CRITICAL GAP

Millions need earlier support

SCALABLE

Phased model, built to learn

SUSTAINABLE

Commercial pathway + impact
